Newborn lambs and goat kids should receive their first feeding of **HEADSTART® HiCal** colostrum as soon after birth as possible, and no later than 6 hours of age. For optimal results, 3 feedings should be delivered in the first 18 hours of life. Undersized, weak or stressed lambs and goat kids may also benefit from continued feeding of **HEADSTART® HiCal** beyond the first day of age.

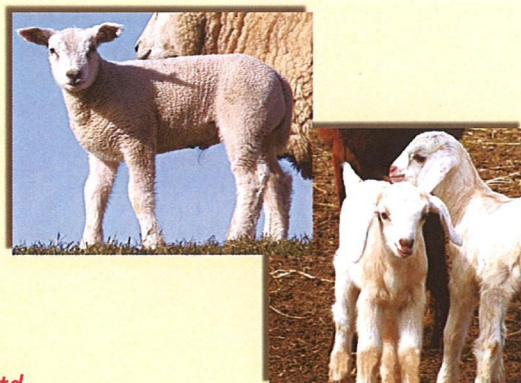

Mixing—Use a whisk to mix each feeding. Mix powder into water that is hot to the touch (55°C or 130°F). Avoid water temperatures above 55°C (130°F). Hot water and vigorous mixing are required because of the high levels of natural fat and proteins.
